Extracting and Visualizing Stock Data

Description

Extracting essential data from a dataset and displaying it is a necessary part of data science; therefore individuals can make correct decisions based on the data. In this assignment, you will extract some stock data, you will then display this data in a graph.

Table of Contents

Estimated Time Needed: **30 min**

Note:- If you are working Locally using anaconda, please uncomment the following code and execute it.

In [34]:
```
#!pip install yfinance==0.2.38
#!pip install pandas==2.2.2
#!pip install nbformat
```

In [35]:
```
!pip install yfinance==0.1.67
!mamba install bs4==4.10.0 -y
!pip install nbformat==4.2.0
```

```

```python
In [36]:   import yfinance as yf
           import pandas as pd
           import requests
           from bs4 import BeautifulSoup
           import plotly.graph_objects as go
           from plotly.subplots import make_subplots
```

In Python, you can ignore warnings using the warnings module. You can use the
filterwarnings function to filter or ignore specific warning messages or categories.

```
In [37]:  import warnings
          # Ignore all warnings
          warnings.filterwarnings("ignore", category=FutureWarning)
```

Define Graphing Function

In this section, we define the function `make_graph`. You don't have to know how the function works, you should only care about the inputs. It takes a dataframe with stock data (dataframe must contain Date and Close columns), a dataframe with revenue data (dataframe must contain Date and Revenue columns), and the name of the stock.

```
In [38]:  def make_graph(stock_data, revenue_data, stock):
              fig = make_subplots(rows=2, cols=1, shared_xaxes=True, subplot_titles=("Hist
              stock_data_specific = stock_data[stock_data.Date <= '2021--06-14']
              revenue_data_specific = revenue_data[revenue_data.Date <= '2021-04-30']
              fig.add_trace(go.Scatter(x=pd.to_datetime(stock_data_specific.Date, infer_da
              fig.add_trace(go.Scatter(x=pd.to_datetime(revenue_data_specific.Date, infer_
              fig.update_xaxes(title_text="Date", row=1, col=1)
              fig.update_xaxes(title_text="Date", row=2, col=1)
              fig.update_yaxes(title_text="Price ($US)", row=1, col=1)
              fig.update_yaxes(title_text="Revenue ($US Millions)", row=2, col=1)
              fig.update_layout(showlegend=False,
              height=900,
              title=stock,
              xaxis_rangeslider_visible=True)
              fig.show()
```

Question 1: Use yfinance to Extract Stock Data

Using the `Ticker` function enter the ticker symbol of the stock we want to extract data on to create a ticker object. The stock is Tesla and its ticker symbol is `TSLA`.

```
In [39]:  Tesla = yf.Ticker("TSLA")
```

Using the ticker object and the function `history` extract stock information and save it in a dataframe named `tesla_data`. Set the `period` parameter to `max` so we get information for the maximum amount of time.

```
In [40]:  Tesla_data = Tesla.history(period="max")
```

Reset the index using the `reset_index(inplace=True)` function on the tesla_data DataFrame and display the first five rows of the `tesla_data` dataframe using the `head` function. Take a screenshot of the results and code from the beginning of Question 1 to the results below.

```
In [42]:  Tesla_data.reset_index(inplace=True)
          Tesla_data.head()
```

Out[42]:

	index	Date	Open	High	Low	Close	Volume	Dividends	Stock Splits
0	0	2010-06-29	1.266667	1.666667	1.169333	1.592667	281494500	0	0.0
1	1	2010-06-30	1.719333	2.028000	1.553333	1.588667	257806500	0	0.0
2	2	2010-07-01	1.666667	1.728000	1.351333	1.464000	123282000	0	0.0

4	4	2010-07-06	1.333333	1.333333	1.055333	1.074000	103003500	0	0.0

Question 2: Use Webscraping to Extract Tesla Revenue Data

Use the `requests` library to download the webpage https://cf-courses-data.s3.us.cloud-object-storage.appdomain.cloud/IBMDeveloperSkillsNetwork-PY0220EN-SkillsNetwork/labs/project/revenue.htm Save the text of the response as a variable named `html_data`.

In [43]:
```
url = " https://www.macrotrends.net/stocks/charts/TSLA/tesla/revenue"
html_data = requests.get(url).text
```

Parse the html data using `beautiful_soup`.

In [44]:
```
soup = BeautifulSoup(html_data,"html5lib")
```

Using `BeautifulSoup` or the `read_html` function extract the table with `Tesla Revenue` and store it into a dataframe named `tesla_revenue`. The dataframe should have columns `Date` and `Revenue`.

In [52]:
```
tables = soup.find_all('table')
for index,table in enumerate(tables):
    if ("Tesla Quarterly Revenue" in str(table)):
        table_index = index
Tesla_revenue = pd.DataFrame(columns=["Date", "Revenue"])
for row in tables[table_index].tbody.find_all("tr"):
    col = row.find_all("td")
    if (col != []):
        Date = col[0].text
        Revenue = col[1].text.replace("$", "").replace(",", "")
        Tesla_revenue = Tesla_revenue.append({"Date":Date, "Revenue":Revenue}, i
```

```
-------------------------------------------------------------------------
IndexError                              Traceback (most recent call last)
/tmp/ipykernel_1317/234429498.py in <module>
      4        table_index = index
      5 Tesla_revenue = pd.DataFrame(columns=["Date", "Revenue"])
----> 6 for row in tables[table_index].tbody.find_all("tr"):
      7     col = row.find_all("td")
      8     if (col != []):

IndexError: list index out of range
```

▶ Click here if you need help locating the table

Execute the following line to remove the comma and dollar sign from the `Revenue` column.

In [48]:
```python
Tesla_revenue["Revenue"] = Tesla_revenue['Revenue'].str.replace(',|\$',"")
```

Execute the following lines to remove an null or empty strings in the Revenue column.

In [49]:
```python
Tesla_revenue.dropna(inplace=True)

Tesla_revenue = Tesla_revenue[Tesla_revenue['Revenue'] != ""]
```

Display the last 5 row of the `tesla_revenue` dataframe using the `tail` function. Take a screenshot of the results.

In [50]:
```python
Tesla_revenue.tail()
```

Out[50]:

Date	Revenue

Question 3: Use yfinance to Extract Stock Data

Using the `Ticker` function enter the ticker symbol of the stock we want to extract data on to create a ticker object. The stock is GameStop and its ticker symbol is `GME`.

In [24]:
```python
gme = yf.Ticker("GME")
```

Using the ticker object and the function `history` extract stock information and save it in a dataframe named `gme_data`. Set the `period` parameter to `max` so we get information for the maximum amount of time.

In [25]:
```python
gme_data = gme.history(period="max")
```

Reset the index using the `reset_index(inplace=True)` function on the gme_data DataFrame and display the first five rows of the `gme_data` dataframe using the `head` function. Take a screenshot of the results and code from the beginning of Question 3 to the results below.

In [26]:
```python
gme_data.reset_index(inplace=True)
gme_data.head()
```

Out[26]:

	Date	Open	High	Low	Close	Volume	Dividends	Stock Splits
0	2002-02-13	1.620128	1.693350	1.603296	1.691666	76216000	0.0	0.0
1	2002-02-14	1.712707	1.716074	1.670626	1.683250	11021600	0.0	0.0
2	2002-02-15	1.683250	1.687458	1.658001	1.674834	8389600	0.0	0.0
3	2002-02-19	1.666418	1.666418	1.578047	1.607504	7410400	0.0	0.0
4	2002-02-20	1.615920	1.662209	1.603296	1.662209	6892800	0.0	0.0

Question 4: Use Webscraping to Extract GME Revenue Data

Use the `requests` library to download the webpage https://cf-courses-data.s3.us.cloud-object-storage.appdomain.cloud/IBMDeveloperSkillsNetwork-PY0220EN-SkillsNetwork/labs/project/stock.html. Save the text of the response as a variable named `html_data`.

In [27]:
```
url="https://www.macrotrends.net/stocks/charts/GME/gamestop/revenue"
html_data= requests.get(url).text
```

Parse the html data using `beautiful_soup`.

In [33]:
```
soup = BeautifulSoup(html_data,"html5lib")
```

Using `BeautifulSoup` or the `read_html` function extract the table with `GameStop Revenue` and store it into a dataframe named `gme_revenue`. The dataframe should have columns `Date` and `Revenue`. Make sure the comma and dollar sign is removed from the `Revenue` column using a method similar to what you did in Question 2.

▶ Click here if you need help locating the table

In [ ]:
```
tables = soup.find_all('table')
for index,table in enumerate(tables):
    if ("GameStop Quarterly Revenue" in str(table)):
        table_index = index
gme_revenue = pd.DataFrame(columns=["Date", "Revenue"])
for row in tables[table_index].tbody.find_all("tr"):
    col = row.find_all("td")
    if (col != []):
        Date = col[0].text
        Revenue = col[1].text.replace("$", "").replace(",", "")
        gme_revenue = gme_revenue.append({"Date":Date, "Revenue":Revenue}, ignor
```

Display the last five rows of the `gme_revenue` dataframe using the `tail` function. Take a screenshot of the results.

```
In [30]: gme_revenue.tail()
```

Out[30]:

Date	Revenue

Question 5: Plot Tesla Stock Graph

Use the `make_graph` function to graph the Tesla Stock Data, also provide a title for the graph. The structure to call the `make_graph` function is `make_graph(tesla_data, tesla_revenue, 'Tesla')`. Note the graph will only show data upto June 2021.

```
In [31]: make_graph(Tesla_data, Tesla_revenue, 'Tesla')
```

Question 6: Plot GameStop Stock Graph

Use the `make_graph` function to graph the GameStop Stock Data, also provide a title for the graph. The structure to call the `make_graph` function is

`make_graph(gme_data, gme_revenue, 'GameStop')` . Note the graph will only show data upto June 2021.

In [53]:
```python
make_graph(gme_data, gme_revenue, 'GameStop')
```

About the Authors:

Joseph Santarcangelo has a PhD in Electrical Engineering, his research focused on using machine learning, signal processing, and computer vision to determine how videos impact human cognition. Joseph has been working for IBM since he completed his PhD.
